the attacker's frontier: λ from 1 (own profit) to 0 (damage)
exact best response, ᾱ = 0.1
exact best response, ᾱ = 0.3
undercut rule
markout rule
exact best response, ᾱ = 0.5
what the attacker earns / (Π^M − Π^C)
what the cartel loses, L_BR / (Π^M − Π^C)
re-learning does not defend the rent
rent units / (Π^M − Π^C)
cartel's rent alone C, ᾱ = 0.1
cartel's rent alone C, ᾱ = 0.3
re-solved best response takes
stale best response still takes
cartel's rent alone C, ᾱ = 0.5
double-oracle round (cartel re-learns 3000 episodes; entrant re-solve
