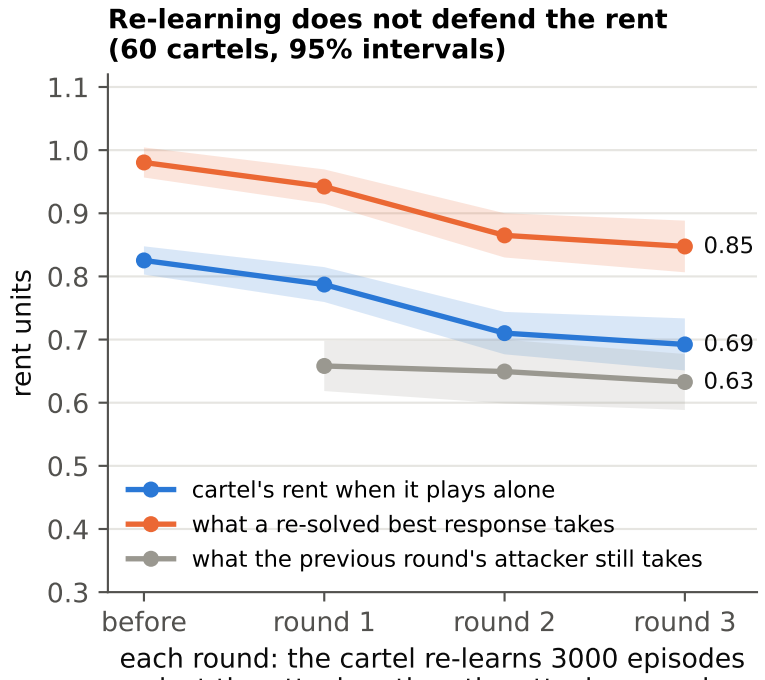
Rules take two thirds of the rent; the exact best response takes all of it and more
Stackelberg value (0.06): the most a no-swap-regret cartel would give up
what the cartel loses
what the attacker earns
undercut rule
(one tick inside the last quote)
0.63
0.51
markout rule
(undercut only when rent is inferred)
0.61
0.55
exact best response
(backward induction, own profit)
0.98
1.15
damage-maximiser
(exact, incumbents' loss)
1.71
0.11
the cartel's whole rent
(C = 0.83 on average)
0.0
0.5
1.0
1.5
2.0
rent units (1 = the monopoly rent $\Pi^M - \Pi^C$); 60 cartels, 95% intervals



Re-learning does not defend the rent
(60 cartels, 95% intervals)
